INTRODUCTION

Operating under the feed, fertilizer, and lime laws of Maryland, representatives of the State Inspection Service, from January 1st to July 1st, collected from the Maryland market and examined in the State Laboratories 2389 samples of the products covered by the above mentioned statutes. Reports covering these samples are included in this publication.

Practically all the States in the Union now have laws which directly regulate the manufacture and sale of agricultural commodities. These laws are more searching and more comprehensive in their regulation than even the pure food and drug laws of the States and the Federal Government. Manufacturers of agricultural commodities realize that in the sale and use of their products they and their customers, the farmers, are engaged in a common enterprise; that success means profit to both, and that failure would mean disaster to both as well as hardship to the public at large. As a result, manufacturers have gladly cooperated with State Administrative Officials, charged with the enforcement of these laws, and have gladly borne the expense of their administration in the form of inspection or license fees.

Any regulatory law should be adequate to protect the farmer and the purchaser, and to furnish him with all the information necessary to enable him to intelligently select the goods he desires to purchase. It should be fair to the manufacturer; it should not impose useless or futile requirements, whose only results would be to increase the cost of the goods and, hence, the price to be paid by the farmer. Above all, it must be a law that the Administrative Control Officer can enforce in a practical way. A law that cannot be so enforced is open to vicious violation by the unscrupulous without fear of penalty, and the detriment alike of the honest manufacturer and of the consumer.

FERTILIZER ANALYSES

A detailed table showing results obtained in the examination of fertilizers from January 1, 1937, to July 1, 1937, is given on pages 6 to 37, inclusive.

When submitting applications for the registration of fertilizers, manufacturers are required to state the percentage of mineral and the percentage of organic nitrogen contained in each product. Each mixed fertilizer is chemically examined for these two forms of nitrogen and reports included herein. The following tolerances or variations from manufacturers' statements have been adopted by this Department.

Mixed fertilizers containing two per cent of nitrogen or less were allowed tolerance of one-fourth of one per cent.

Mixed fertilizers containing three per cent of nitrogen a tolerance of one-third of one per cent.

Mixed fertilizers containing four per cent or more of nitrogen, one-half of one per cent.

FEED ANALYSES

- (A) General Feeds
- (B) Dog Foods
- (C) Mineral Mixtures

The results obtained in the chemical and microscopical examination of feeds, dog foods, and mineral mixtures, are found on page 40 to 117. Feeds are considered seriously deficient as regards chemical analysis when they are one per cent or more deficient in protein, or one-half of one per cent deficient in fat.

LIME ANALYSES

A detailed report of the results obtained in the inspection and analysis of agricultural liming materials from January 1, 1937 to July 1, 1937, is contained in pages 120 to 129, inclusive. Limes are considered seriously deficient with respect to chemical analysis when they are one per cent deficient in total oxides.
